

Jeffry Ma

Software Development Manager

Vancouver, BC, Canada | <https://www.linkedin.com/in/jef2k85>

Experienced Software Development Manager for almost three years leading a team of 7 engineers. Over 15 years in software engineering, with a proven track record in delivering impactful solutions, including USD 11MM savings from fraudulent-related losses and streamlining operations by 87%. Experience includes 5 years of development using AWS, 3 years of iOS development, 4 years of front-end development, and 3 years of device driver development. Oracle Certified Master Java SE 6 Developer.

Technical Skills

Languages

Java, JavaScript, TypeScript, Python, Kotlin, Objective-C, Swift, C, C++, C#, HTML, CSS, React, jQuery

Amazon Web Services

SQS, SNS, DynamoDB (NoSQL), RDS (SQL), CDK, IAM, EC2, CloudFormation, CloudTrail, Fargate, Elasticsearch, Lambda, Step Functions

Methodologies

Microservices, Kanban, Agile, Scrum

Testing

Junit, Mockito, Jest, Jasmine, Selenium

Other Tools

Git, GitHub, Gerrit, JIRA, Confluence, Maven, Ant, Liquibase, Perforce, SVN, CVS

Professional Experience

Amazon Canada | *Vancouver, BC, Canada*

Software Development Manager | *March 2022 – Present*

- Managing a team of 7 SDEs.
- Partnering closely with cross-functional teams - including product, marketing, senior SDEs and engineering teams on requirements gathering, design, and planning; implemented processes to keep my team aligned on our priorities and come up with accurate timelines for the charter.
- Working with an offshore team, helping them move in the same direction with my team, and created mechanisms to keep them aligned.
- Created mechanisms to keep leadership in the loop on charter progress and roadmap updates.
- Experience in “startup culture”; prioritized fast deliveries during initial ramp up of the charter, which resulted in 87% reduction (from 3000 down to 400) manual inputs for 35% of marketing campaigns, and estimated 187 hours saved for another 15% of campaigns.
- Drove software ownership intake and handoff, including proper knowledge transfer sessions and asset transfers, when the outgoing team transitioned their software to us, and my team transitioned to another department.
- Maintaining software quality by participating in software design reviews, giving guidance on architectural design best practices, and business needs for the charter.
- Training SDEs to write better software design documents, and giving critical feedback on their documents, beyond the design.
- Instituted mechanisms to ensure my team remains on track for our deliveries, and be accountable for them.
- Instituted weekly oncall rotation to ensure our software pipeline blockages are unblocked in the same business day where possible, and maintained a mechanism to monitor company-wide operational asks that may become a risk if not acted upon timely.
- Promoted one engineer to become an Amazon Bar Raiser, and mentored another who became a Bar Raiser.
- Working on three promotions targeting Q1 2025 (two SDE1 to SDE2, one SDE2 to Senior SDE).
- Conducted over 210 interviews as an Amazon Bar Raiser, and as a hiring manager.

Amazon Canada | Vancouver, BC, Canada
Software Development Engineer | September 2019 – March 2022

- Delivered and maintained an automated Emailing system to customers who failed to return their merchandise after being refunded, which saved 6 hours per week of manual work for our investigators.
- De-risked a project by guiding a junior SDE to simplifying his design, and brought the project back from red to green; delivered on time a month later.
- Led Amazon's Mobile Security Foundation's initiative on developing privacy API guardrails in compliance with EU General Data Protection Regulation (GDPR, maximum 2% worldwide revenue penalty for non-compliance), and came up with a strategy on how to scan and detect these potential privacy risks. Of the 400 issues found, forwarded 30 to EU Legal for next steps.
- Designed, implemented and maintained a service to ingest data from payable and payment components into Elasticsearch upwards of at least 1300 messages per minute at launch. Also implemented and maintained corresponding front end components (Typescript, React) for our finance partners to search these records.

SAP Canada Inc. | Vancouver, BC, Canada
Senior Software Developer | April 2015 - September 2019
Software Developer | April 2012 - March 2015

- Worked on an urgent Value Driver Tree Proof of Concept, enabling real-time what-if analysis during SAP's quarterly financial release meeting for our global executive team, resulting in enhanced decision-making.
- Designed, implemented and maintained the remote connection features of our SAP Analytics Cloud (SAC) iOS application, allowing our customers to use SAC offerings on the cloud with data directly from their On-Premise SAP HANA and BW systems without going through our servers. This was a required feature for a majority of our EU C-level customers due to privacy, data sensitivity, and compliance with EU GDPR, increasing adoption of SAC.
- Successfully collaborated with four C-level customers and resolved their remote connection scenarios.
- Led software ownership intake, maintained and resolved two major outages within three days of full ownership.
- Worked on network reduction features to reduce networking calls by about 25%.
- Managed the SAC iOS delivery to the Apple App Store every two to four weeks, including Test Flight procedures needed for internal and external testing.
- Created the Jasmine testing infrastructure for testing the Story stack of SAC.
- Conducted 30+ interviews for our junior, intermediate, and senior developer openings during the SAP's Vancouver expansion, and conducted interviews for intern developer positions on an ongoing basis.
- Mentored junior team members and interns on an ongoing basis.

Microsoft Corporation | Redmond, WA, United States of America
Software Development Engineer | July 2009 to March 2012

- Troubleshooted one customer's Web Services on Devices (WSD) printer issue, and received a Gold Star Award (USD 10k bonus) for that effort.
- Delivered Windows 8 WSD traffic reduction feature in C++ which reduced WS-Discovery network traffic by as much as 90% as compared to Windows 7 benchmark.
- Created the initial set of WS-Discovery MSDN SDK sample code, which was released as part of the //BUILD/Conference in 2010 <https://github.com/microsoft/Windows-classic-samples/tree/main/Samples/WebServicesDevicesApi/WSDDiscovery>
- Developed the Windows 8 Bluetooth Low Energy ATT / GATT layers, which is the backbone LE protocol that powered up Bluetooth LE devices such as the Bluetooth LE Keyboards (7+ years of battery life).

2 years' worth of internship experiences from 2005 to 2008 available upon request.

Jeffry Ma | Software Development Manager
Vancouver, BC, Canada | <https://www.linkedin.com/in/jef2k85>

Education

University of Waterloo | *Waterloo, ON, Canada*
Bachelor of Applied Sciences, Honours Computer Engineering, Management Sciences Option
September 2004 to June 2009

Certifications

Oracle Certified Master Java SE 6 Developer
